1 Executive Summary

The global cyber warfare market is expected to grow at a CAGR of XX%

Global spending on cyber warfare systems is expected to remain robust over the forecast period due primarily to the increased importance of such systems in modern warfare. The formation of the US Cyber Command, or US CYBERCOM, by the highest defense spender globally, highlights the importance of cyber warfare in today's world. Furthermore, the cyber attacks in South Korea, the US, Estonia, and Georgia in 2011, add credence to the growing expenditure on global cyber warfare systems. Wars include a mix of physical, mental, and tactical elements, with information and communication technologies (ICT) playing a major role in the capabilities of mobile forces armed with real-time information devices. ICTs can be used to attack these battlefield systems directly, to capture sensitive data from defense contractors and governments or disrupt national infrastructure. Equally, defense systems must be built to detect and counter these attacks, making cyber warfare systems essential tools for maintaining an advantage in modern conflicts. The market for cyber security is expected to increase from US\$XX billion in 2013, to US\$XX billion by 2023, representing a CAGR of XX%.
